### “Future Play”

Play is often misunderstood as being unproductive, but in fact, this unproductive pleasure have produced the most productive outcomes. Play is a form of communication and expression, combining thought and action; it gives satisfaction and a feeling of achievement. Through playing children can develop physically, mentally, emotionally and socially.

*“That every child has the right to rest and leisure,  
to engage in play and recreational activities appropriate to the age of the child  
and to participate freely in cultural life and the arts.  
(Article 31) (Committee on the Rights of the Child, 2013)”*

What kind of toys do you want to play in the future? What kind of activities do you want to enjoy at school, home and outside? What is your dream playground in the future? Imagine what you will enjoy to play with your friends, family or even by yourself in the future.

For example, you love to play soccer and your friend likes to draw, how will you collaborate these two to create something new to play together? Will there be any changes of the rules or method to the original plays due to the change of the way people live?

Our joyful imagination will become the basis for the leap to a new era of playing. Scratch Creative Challenge is looking forward to students who has the potential to create a imaginative future entertainment using Scratch 3.0, LEGO® Education SPIKE™ Prime and various materials
